

Frequently Asked Questions

Q. Will the Aqua Stack™ plug off my stack?

A. No. The Aqua Stack™ will actually make more room in your stack by condensing the exhaust vapors as they come through.

For example, if you have a balloon full of air that measures 10" in diameter and you are trying to get it through an 8" hole you would have a problem. But if you let the air out then the 8" hole would be more than big enough. The Aqua Stack™ shrinks the expanded gasses as they come through making plenty of room for the gasses to exhaust.

Q. Will the Aqua Stack™ get full of creosote?

A. No. Our test stoves showed that the creosote was still there, it just burned in the fire box more than it collected in the chimney. Due to the extended time of the stove's down time the wood had more time to dry, therefore the creosote BTU's were captured in the fire box.

Q. Will the Aqua Stack™ hurt my stove?

A. No. The Aqua Stack™ will enhance the performance of any wood stove, some more than others. It will only improve the efficiency of your stove. Please keep in mind the Aqua Stack™ must have a continuous flow of water to work safely and efficiently.

Q. How does the Aqua Stack™ work?

A. The Aqua Stack™ is placed in the path of your exhausting flue gas and where it will reclaim 50% or more of the waste heat leaving your stove.

Q. Will I need an extra pump to operate the Aqua Stack™?

A. No. The Aqua Stack™ hooks up to your existing return line going into the stove. A dedicated pump can be used whenever a continuous flow does not exist. A help number is provided for installation instructions and assistance.

Q. Will the Aqua Stack™ work for a natural draft stove?

A. Yes! The Aqua Stack™ acts like a giant ice cube in the stack by shrinking the vapor when they pass by, and it also creates a vacuum towards the stack and reclaim heat from the waste heat at the same time.

Q. Can I install the Aqua Stack™ myself?

A. Yes! The Aqua Stack is easy to install and is sold with full installation instructions and a help number is provided for additional assistance.

Installation is available in selected
